Computer Methods in Applied Mechanics and Engineering 110 (1993) 395–399
North-Holland

Subject index of Volume 110*

Boundary element methods
On the *h-p* version of the boundary element method for Symm's integral equation on polygons, V.J. Ervin, N. Heuer and E.P. Stephan (1–2) 25– 38
A fast boundary element method for the two-dimensional Helmholtz equation, Y. Yan (3–4) 285–299

Boundary layers
A two-dimensional time dependent Chebyshev method of collocation for the study of astrophysical flows, P. Godon and G. Shaviv (1–2) 171–194
Numerical modelling of laminar-turbulent transition in the boundary layers under the influence of low free-stream turbulence intensities, D. Marinov and Z. Zapryanov (3–4) 263–273

Calculus of variations
Delamination of composites as a substationarity problem: Numerical approximation and algorithms, M.A. Tzaferopoulos and P.D. Panagiotopoulos (1–2) 63– 85

Collocation method
Thermal convection in vertical cylinders. A method based on potentials of velocity, F. Marqués, M. Net, J.M. Massaguer and I. Mercader (1–2) 157–169
A two-dimensional time dependent Chebyshev method of collocation for the study of astrophysical flows, P. Godon and G. Shaviv (1–2) 171–194

Conformal mapping
Finite difference, boundary-fitted grid generation for arbitrarily shaped two-dimensional simulation areas, C. Fischer, G. Nanz and S. Selberherr (1–2) 17– 24

Dynamics
Some aspects of the statistics of a bilinear hysteretic structure under a non-white random excitation, P.K. Koliopulos, E.A. Nichol and G.D. Stefanou (1–2) 57– 61
Divergence of a rotating shaft with an intermediate support and conservative axial loads, H.P. Lee (3–4) 317–324

Elasticity
Computer-based manipulation of systems of equations in elasticity problems with Gröbner bases, N.I. Ioakimidis and E.G. Anastasselou (1–2) 103–111
On the use of a segmental shooting technique for multiple solutions of planar elastica problems, M.G. Faulkner, A.W. Lipsett and V. Tam (3–4) 221–236
Flexural vibration of shear deformable circular and annular plates on ring supports, K.M. Liew, Y. Xiang, C.M. Wang and S. Kitipornchai (3–4) 301–315

* The issue number is given in front of the page numbers.

Finite difference methods
Finite difference, boundary-fitted grid generation for arbitrarily shaped two-dimensional simulation areas, C. Fischer, G. Nanz and S. Selberherr (1–2) 17– 24
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142

Finite element and matrix methods
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16
Artificial boundary conditions for 2D problems in geophysics, D. Givoli and S. Vigdergauz (1–2) 87–101
A Douglas–Wang finite element approach for transient advection–diffusion problems, A. Khelifa, J.-L. Robert and Y. Ouellet (1–2) 113–129
Natural convection in a differentially heated square cavity with a horizontal partition plate on the hot wall, A. Nag, A. Sarkar and V.M.K. Sastri (1–2) 143–156
Quadrilateral finite elements for analysis of thick and thin plates, A. Ibrahimbegović (3–4) 195–209
An iterative penalty method for the finite element solution of the stationary Navier–Stokes equations, R. Codina (3–4) 237–262
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283
A discontinuity-capturing crosswind-dissipation for the finite element solution of the convection-diffusion equation, R. Codina (3–4) 325–342
A stable bilinear element for the Reissner–Mindlin plate model, M. Lyly, R. Stenberg and T. Vihinen (3–4) 343–357
Improved versions of assumed enhanced strain tri-linear elements for 3D finite deformation problems, J.C. Simo, F. Armero and R.L. Taylor (3–4) 359–386

Fluid mechanics
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16
A Douglas–Wang finite element approach for transient advection–diffusion problems, A. Khelifa, J.-L. Robert and Y. Ouellet (1–2) 113–129
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142
An iterative penalty method for the finite element solution of the stationary Navier–Stokes equations, R. Codina (3–4) 237–262
A discontinuity-capturing crosswind-dissipation for the finite element solution of the convection-diffusion equation, R. Codina (3–4) 325–342

Gas dynamics
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16

General Rayleigh–Ritz and Galerkin techniques
Flexural vibration of shear deformable circular and annular plates on ring supports, K.M. Liew, Y. Xiang, C.M. Wang and S. Kitipornchai (3–4) 301–315

Heat and diffusion
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16

Natural convection in a differentially heated square cavity with a horizontal partition plate on the hot wall, A. Nag, A. Sarkar and V.M.K. Sastri (1–2) 143–156
Thermal convection in vertical cylinders. A method based on potentials of velocity, F. Marqués, M. Net, J.M. Massaguer and I. Mercader (1–2) 157–169

Incompressible and near incompressible media
Thermal convection in vertical cylinders. A method based on potentials of velocity, F. Marqués, M. Net, J.M. Massaguer and I. Mercader (1–2) 157–169
An iterative penalty method for the finite element solution of the stationary Navier–Stokes equations, R. Codina (3–4) 237–262

Kinematics
Computerized generation of surfaces with optimal approximation to ideal surfaces, F.L. Litvin, N.X. Chen, Y. Zhang, T.J. Krenzer and R.F. Handschuh (1–2) 39– 55

Miscellaneous topics
Computer-based manipulation of systems of equations in elasticity problems with Gröbner bases, N.I. Ioakimidis and E.G. Anastasselou (1–2) 103–111

Nonlinear mechanics
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16
Delamination of composites as a substationarity problem: Numerical approximation and algorithms, M.A. Tzaferopoulos and P.D. Panagiotopoulos (1–2) 63– 85
Design variations of nonlinear elastic structures subjected to follower forces, M.J. Poldneff, I.S. Rai and J.S. Arora (3–4) 211–219
On the use of a segmental shooting technique for multiple solutions of planar elastica problems, M.G. Faulkner, A.W. Lipsett and V. Tam (3–4) 221–236
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283
Improved versions of assumed enhanced strain tri-linear elements for 3D finite deformation problems, J.C. Simo, F. Armero and R.L. Taylor (3–4) 359–386

Numerical solution procedures
On the *h-p* version of the boundary element method for Symm's integral equation on polygons, V.J. Ervin, N. Heuer and E.P. Stephan (1–2) 25– 38
Artificial boundary conditions for 2D problems in geophysics, D. Givoli and S. Vigdergauz (1–2) 87–101
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142
On the use of a segmental shooting technique for multiple solutions of planar elastica problems, M.G. Faulkner, A.W. Lipsett and V. Tam (3–4) 221–236
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283
A fast boundary element method for the two-dimensional Helmholtz equation, Y. Yan (3–4) 285–299
Flexural vibration of shear deformable circular and annular plates on ring supports, K.M. Liew, Y. Xiang, C.M. Wang and S. Kitipornchai (3–4) 301–315

Optimization
Delamination of composites as a substationarity problem: Numerical approximation and algorithms, M.A. Tzaferopoulos and P.D. Panagiotopoulos (1–2) 63– 85
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142
Design variations of nonlinear elastic structures subjected to follower forces, M.J. Poldneff, I.S. Rai and J.S. Arora (3–4) 211–219
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283

Optimization and design of structures
Design variations of nonlinear elastic structures subjected to follower forces, M.J. Poldneff, I.S. Rai and J.S. Arora (3–4) 211–219

Shells and plates
Quadrilateral finite elements for analysis of thick and thin plates, A. Ibrahimbegović (3–4) 195–209
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283
Flexural vibration of shear deformable circular and annular plates on ring supports, K.M. Liew, Y. Xiang, C.M. Wang and S. Kitipornchai (3–4) 301–315
A stable bilinear element for the Reissner–Mindlin plate model, M. Lyly, R. Stenberg and T. Vihinen (3–4) 343–357

Solution of differential equations
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142

Stability in fluid mechanics
Thermal convection in vertical cylinders. A method based on potentials of velocity, F. Marqués, M. Net, J.M. Massaguer and I. Mercader (1–2) 157–169

Stability in structural mechanics
On the use of a modified Newton method for nonlinear finite element analysis, A. Forsgren and U. Ringertz (3–4) 275–283
Divergence of a rotating shaft with an intermediate support and conservative axial loads, H.P. Lee (3–4) 317–324

Structural mechanics
Delamination of composites as a substationarity problem: Numerical approximation and algorithms, M.A. Tzaferopoulos and P.D. Panagiotopoulos (1–2) 63– 85
Computer-based manipulation of systems of equations in elasticity problems with Gröbner bases, N.I. Ioakimidis and E.G. Anastasselou (1–2) 103–111
Quadrilateral finite elements for analysis of thick and thin plates, A. Ibrahimbegović (3–4) 195–209
Design variations of nonlinear elastic structures subjected to follower forces, M.J. Poldneff, I.S. Rai and J.S. Arora (3–4) 211–219
Flexural vibration of shear deformable circular and annular plates on ring supports, K.M. Liew, Y. Xiang, C.M. Wang and S. Kitipornchai (3–4) 301–315

A stable bilinear element for the Reissner–Mindlin plate model, M. Lyly, R. Stenberg and T. Vihinen (3–4) 343–357
Improved versions of assumed enhanced strain tri-linear elements for 3D finite deformation problems, J.C. Simo, F. Armero and R.L. Taylor (3–4) 359–386

Subsonic flow
Compressible flow airfoil design using natural coordinates, P. Chaviaropoulos, V. Dedoussis and K.D. Papailiou (1–2) 131–142

Systems of linear and nonlinear mechanics
Computer-based manipulation of systems of equations in elasticity problems with Gröbner bases, N.I. Ioakimidis and E.G. Anastasselou (1–2) 103–111

Transport phenomena
A discontinuity-capturing crosswind-dissipation for the finite element solution of the convection-diffusion equation, R. Codina (3–4) 325–342

Turbulence
Turbulent fluid flow and its incorporation into combustion processes, J. Argyris, H. Friz, B. Huurdeman and A. Laxander (1–2) 1– 16

Viscous flow
Thermal convection in vertical cylinders. A method based on potentials of velocity, F. Marqués, M. Net, J.M. Massaguer and I. Mercader (1–2) 157–169
A two-dimensional time dependent Chebyshev method of collocation for the study of astrophysical flows, P. Godon and G. Shaviv (1–2) 171–194
An iterative penalty method for the finite element solution of the stationary Navier–Stokes equations, R. Codina (3–4) 237–262
